

Getting AI to summarise a company is easy. Proving it didn't make anything up is the product.

1 · THE PROBLEM

“What do you think about NVDA?”

The client asks mid-call. The advisor has five minutes, and has to back up every word. Repeating something an AI invented is a compliance breach.

TO ANSWER IT PROPERLY TODAY
JPMorgan's last annual report: **1.2 million characters**, before one update since.

WITH GLOBALINSIGHT
Facts on screen in under **1 second**. The full written brief in under **a minute**.

2 · WHAT WE'RE BUILDING

A one-page briefing for a client call, built only from what the company has filed with the regulator. The numbers never pass through the AI. Every sentence the AI writes is footnoted to a document — and anything it can't source is deleted.

3 · WHAT IT'S WORTH TO YOU

0

Claims compliance can't trace

Every line footnoted to a filing. What can't be sourced is deleted, not flagged.

1 sec

Your advisor is talking

Price, three years of real results and every document on file — before the AI starts.

85¢

Per company, not per question

A filed report never changes, so we read it once. Your whole coverage list, overnight.

11¢

Per follow-up question

Advisors keep asking — about 20 seconds each, quoting the document it came from.

Ask it whether something's a buy and it refuses — before reading anything, the same way every time.
